About Me

Software Engineer with over 10 years of experience.

Specialized in **Development, QA Automation, and Infrastructure.**

My focus is on guaranteeing quality and optimizing delivery times through process automation.

I am capable of **transforming an idea into a deployed and optimized product.**

I maintain a constant experimentation **HomeLab**, where I design and validate automated environments, scalable architectures, and cutting-edge technologies.

Key Contributions

- **CI/CD Optimization:** Pipeline design for full automation of testing and deployments, eliminating manual errors and accelerating delivery frequency.
- **Quality Engineering (QA):** Development of automated testing suites that ensure solid, maintainable, and scalable code.
- **Generative AI and Agents:** Implementation of intelligent flows for the automation of operational tasks and efficient data processing.

Technical Stack

- **QA Automation:** Playwright, Cypress, Selenium, k6, JMeter, Newman, SonarQube.
- **CI/CD:** GitHub Actions, GitLab CI/CD, Ansible, Terraform, Jenkins, Git.
- **Development:** Python, FastAPI, Node.js, PHP, JavaScript, C#, Bash.
- **Infrastructure:** Linux, Docker, Kubernetes, K3s, LocalStack, Nginx, Apache.
- **AI & Agents:** Ollama, LangChain, OpenRouter, n8n, OpenClaw.
- **Cloud AWS:** EC2, S3, Lambda, VPC, IAM.
- **Cloud GCP:** Compute Engine, Cloud Storage, Cloud Functions, VPC, IAM.
- **Databases:** MySQL, MariaDB, SQL Server, Redis.
- **Platforms:** SuiteCRM, SugarCRM, WordPress, LimeSurvey, Botmaker.

Education

Universidad Nacional de La Matanza

Software Engineering, Graduated 2019

Final Degree Project Parkinsoft

- Clinical voice monitoring system for Parkinson's patients.
- Fullstack development using R, bash, Laravel, PHP, MySQL, REST API.
- Solution deployment on Google Cloud Platform GCP.

Experience

Software Engineer & SysAdmin
Freelance

2018-Present · 7 years

Software Engineer

- Architecture, design, and development of robust and scalable solutions.
- Development of testing strategies with Selenium and JMeter.
- Advanced debugging and complex bug resolution.
- Responsible for Code Reviews and Git Merge management.
- Technical Lead for clients and internal teams.
- Clear communication of technical solutions to non-technical profiles.
- Mentoring and Training of new team members.
- Task assignment, tracking, and delivery planning.
- Requirements gathering and client needs analysis.

SysAdmin

- Management of Linux infrastructure, Web services, and databases.
- Monitoring and incident resolution in production environments.
- Deployments, upgrades, and migrations of applications and data.
- Automation of repetitive tasks and processes.
- Application containerization and environment standardization.
- Implementation and maintenance of CI/CD pipelines.

Technical Analyst
Defensoría del Pueblo de la Ciudad de Buenos Aires

Part-time · 2018-2022 · 4 years

- Development of Web and Mobile applications.
- Infrastructure management of LAMP stack Linux, Apache, MySQL, PHP.
- Deployment automation with Ansible.
- Requirements gathering and documentation.
- Preparation of technical and functional documentation.
- Project planning, version control, and task management in Redmine.
- Compliance with quality processes under IRAM-ISO 9001 standard.

Software Developer
Solutica

2016-2018 · 2 years

- Debt collection system for the pharmaceutical industry.
- Fullstack development using MVC, .NET, C#, JS, HTML, CSS, SQL Server.
- Creation of complex reports with SQL Server Reporting Services.
